

Intelligent Connectivity

# Build an intelligent network to match your business ambitions

**Thriving in a digital-first world  
starts with a smarter connectivity.**

A competitive operating environment, characterised by data complexity, cyber threats, environmental pressures, and hybrid working, means it is more important than ever build a scalable and secure network for your cloud journey, so you can thrive in a digital-first world.

That's why we've designed Intelligent Connectivity. It lays a scalable and secure foundation to help you adapt to changing needs and harnesses growing data volumes, so you have the insights to deliver unmatched digital performance and predictable user-experiences, all while mitigating risks, and optimising costs.

# A smarter way to support your cloud journey

Turn your network into a data-driven driver of business performance.

## Agility and scalability

Our intelligent network is architected for agility, now and into the future. Scale your network up or down based on business demand and react quickly to changing requirements, with a flexible consumption-based model.

## Security as an enabler

Our intelligent network is secure by design, be reassured or rest assured with the knowledge that security has been woven into the fabric of your network. Providing you with flexibility to take advantage of opportunities in real time.

## Predictable user experience

We enable intelligent predictive analysis of your network traffic utilising best of breed AI to provide real-time insights into connectivity and app performance. This allows for proactive management and reliable user experience.

## Sustainability by design

Our solution enables businesses to digitalize and dematerialize their core IT solutions, measurably reduce their carbon footprint. Our solution allows technology to become a key contributor to your sustainability initiatives.

# Solution building blocks

Intelligent Connectivity is a SASE-based managed offering that delivers access and zero-trust security from edge to edge, with real-time insights into network, connectivity and application performance – all managed by a trusted expert.

# How we get you there

We help you achieve agile, secure, visible connectivity, and then help you along the journey towards continuous optimisation with ongoing visibility and managed services.

## 1. Align

Current network assessment, business requirements, gap analysis and solution roadmap.

## 2. Transform

Intelligent network implementation delivered with efficient and effective change management.

## 3. Scale

Continuous visibility and performance improvement with ongoing managed services.

Ready to benefit from  
Intelligent Connectivity to  
underwrite your digital initiatives?

To start benefiting from a smarter network solution that lays the foundation for your cloud journey, so you can thrive in a digital-first world and drive better business performance.
